CWDM technology offers a convenient and cost-efficient solution for shorter distances of up to 70 kilometers. For distances between 40 and 70 kilometers, CWDM tends to be limited to supporting eight channels. DWDM. Unlike CWDM, DWDM connections can be amplified and can, therefore, be used for

based transceivers are included to bridge longer distances and provide the higher capacity capabilities offered by these technologies. The supported protocols span over Ethernet, Fiberchannel, CPRI, OBSAI, SDH/SONET and OTN enabling them to be used in multiple applications such as Ethernet Networks, mobile backhaul/fronthaul,
