Features: The hot water from the furnace may be used for several applications in your home. The hot water line is typically connected to your hot water tank through a heat exchanger, providing all your domestic hot water. The water is then channeled into the existing radiant or forced air heating system.

Yes. In Canada, residential indoor boilers and furnaces are only subject to “The Code of Practice for Residential Wood Burning Appliances,” which says that a boiler must have a particulate emission limit of 0.4 g/MJ. This is roughly equal to 0.93 lb/mmBtu, much higher than the EPA’s requirement of 0.32 lb/mmBtu for residential wood heaters.
