Process devices with fieldbus connectivity include: • Flowmeters; • Pressure sensors; • Level sensors; • Control valves; and • Temperature sensors. Both process fieldbuses carry power to the devices and are designed to operate safely in hazardous environments. This is a major advantage where there is potential for fire or explosions.

### Control Engineering | Fieldbus in the field

Fieldbus is the name of a family of industrial computer networks used for real-time distributed control. Fieldbus profiles are standardized by the International Electrotechnical Commission as IEC 61784/61158. A complex automated industrial system is typically structured in hierarchical levels as a distributed control system. In this hierarchy the upper levels for production managements are linked to the direct control level of programmable logic controllers via a non-time-critical communications

## **Fieldbus - Wikipedia**

OLE for Process Control (OPC) and its OPC DX and OPC XML software aid interoperability by serving as a between devices on fieldbuses, according to Tom Burke, president of the OPC Foundation. Because it functions in the software layers above the fieldbuses, Caro adds that OPC can accomplish some added interoperability between dissimilar systems and protocols.
