Buffer

pH of a buffer solution is well approximated by the Henderson Hasselbalch equation: $\text{pH} = \text{pK}_a + \log \frac{c_b}{c_a}$ (10) Dilution of the buffer solution affects c_a and c_b by the same factor, so the ratio is unchanged upon dilution. Preparation of a buffer solution is easily accomplished by mixing solutions of the

Analysis Buffer with Base Set Up:

Access PDF Properties Of Buffer Solutions Lab 16

Calculations: Graph and table NaOH (the pH was after the pH meter was removed) Add 55 mL of 0.5 M acetic acid with 45 mL of 0.5 sodium acetate to create 100 mL buffer solution. Measure out 25 mL of buffer into a beaker and add 10 mL .2 M HCl.

Properties of Buffer Solutions: by

Acces PDF Properties Of Buffer Solutions Lab 16

Carissa Villanueva

A buffer is a solution that can resist pH change upon the addition of an acidic or basic components. It is able to neutralize small amounts of added acid or base, thus maintaining the pH of the solution relatively stable. This is important for processes and/or reactions which require specific and stable pH ranges.
