In addition to considering different material properties, the design process of the steel silo also considers which industry the steel silo will be used for. For example, in the oil industry, the design of the steel silo only needs to consider wind load, snow load, self-weight load, etc. Other loads are small.

What Could Cause Steel Silo Collapse and How to Prevent It

The silos load determination is described in Part 1 - General Requirements and assessment of Bin loads. The criteria for the design of the silo are given in - Design Criteria. Part 2 In 1968, this standard was published by considering the requirements of structural design for food grain storage bins (silos) [5].
